NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

(PCT Rule 71.1)

Date of mailing

(day/month/year)

16.01.2006

Applicant's or agent's file reference

TIMK 8805WO

IMPORTANT NOTIFICATION

International application No. PCT/US2004/038250

10.11.2004

Priority date (day/month/year)

10.11.2003

Applicant

THE TIMKEN COMPANY et al.

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary report on patentability and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.

International filing date (day/month/year)

3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary report on patentability. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed inventions is patentable or not" (see also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/US2004/038250

26 APR 2006

Re Item V.

1 Reference is made to the following documents:

D1: US 4 167 297 A (CHEESMAN ET AL) 11 September 1979 (1979-09-11)

D2: EP 0 677 673 A (SNR ROULEMENTS) 18 October 1995 (1995-10-18)

D3: US 2 647 025 A (DEFFENBAUGH JOHN L) 28 July 1953 (1953-07-28)

D4: US 3 201 134 A (HAYATIAN ALLAN A) 17 August 1965 (1965-08-17)

2 INDEPENDENT CLAIM 1

2.1 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 1 is not new in the sense of Article 33(2) PCT.
Document D1 discloses (the references in parentheses applying to this document):

an assembly for accommodating rotation about an axis (see fig.1), said assembly comprising: a first member (10); a second member (F); a bearing located between the first and second members (10,F) and having an inner race (12) fitted to the first member (10) and provided with a raceway (12b) that is presented away from the axis, an outer race (22) that is fitted to the second member (F) and is provided with a raceway (22b) that is presented toward the axis and the raceway (12b) of the inner race (12), and rolling elements (24) located between and contacting the raceways (12b,22b) of the inner and outer races (12,22); a seal (S) for isolating the interior of the bearing from external contaminants and including a first wear ring (30d), a second wear ring (30c), a backing element (30b,30a) urging one of the wear rings (30d,30c) toward the other wear ring (30d,30c), at least one of the wear rings (30d) being carried by one of the races (22,26).

The subject-matter of claim 1 is therefore not new.

2.2 Also documents D2 and D3 disclose the subject-matter of claim 1.

3 INDEPENDENT CLAIM 18

3.1 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 18 is not new in the sense of Article 33(2) PCT.

Document D1 discloses (the references in parentheses applying to this document):

a bearing assembly for facilitating rotation about an axis (see fig.1), said bearing assembly comprising: an inner race (12) having a raceway (12b) that is presented outwardly away from the axis; an outer race (22) having a raceway (22b) that is presented inwardly toward the axis and toward the raceway (12b) on the inner race (12), rolling elements (24) located between and contacting inner and outer raceways (12b,22b); an extension (26) joined (column 5, lines 22-25) to the outer race (22) and projecting axially beyond the raceway (22b) of the outer race (22), a first wear ring (30d) having a wear surface located at an angle with respect to the axis; a first backing element (30b) supporting the first wear ring (30d) on the extension (26) and urging the first wear ring (30d) away from the extension (26); a second wear ring (30c) having a wear surface located at a steep angle with respect to the axis and contacting the wear surface of the first wear ring (30d); a second backing element (30a) supporting the second wear ring (30c); the two wear rings (30d,30c) being biased toward each other.

The subject-matter of claim 18 is therefore not new.

- 3.2 Also documents D2 and D3 disclose the subject-matter of claim 18.
- 4 INDEPENDENT CLAIM 26
- 4.1 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 26 is not new in the sense of Article 33(2) PCT.

 Document D4 discloses (the references in parentheses applying to this document):
 - a seal (see fig. 2-4) for establishing a fluid barrier around an axis of rotation, said seal comprising: a first wear ring (61) having a wear surface (69) that lies at

an angle with respect to the axis; a second wear (61a) ring located adjacent to the first wear ring (61) and having a wear surface (69) that is against the wear surface (69) of the first wear ring (61); a first backing element (62) for urging the first wear ring (61) toward the second wear ring (61a), the first backing element (62) being formed from a polymer (column 4, line 38: "rubber") and including, a base (73) located remote from the first wear ring (61), a floating segment (74) attached to the first wear ring (61), and a resilient connecting segment (71) extending between and attached to the base (73) and floating segments (74); a second backing element (62a) for urging the second wear ring (61a) toward the first wear ring (61), the second backing element (62a) being formed from a polymer and including a base located remote from the second wear ring, a floating segment attached to the second wear ring, and a resilient connecting segment extending between and attached to the base and floating element.

The subject-matter of claim 26 is therefore not new.

- DEPENDENT CLAIMS 2-11, 16, 17, 19-21, 24, 25, 27-29
 Dependent claims 2-11, 16, 17, 19-21, 24, 25, 27-29 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of novelty and/or inventive step (Article 33(2) and (3) PCT) for the following reasons:
- 5.1 Document D1 further discloses the subject-matter of claims 2, 6-8, 10, 17, 19-21, 24.
- 5.2 Document D2 further discloses the subject-matter of claims 2, 3, 8, 11, 19, 20.
- 5.3 Document D3 further discloses the subject-matter of claims 2,5,19.
- 5.4 Document D4 further discloses the subject-matter of claims 27-29.
- 5.5 In claims 4, 9, 16 and 25 slight constructional changes in the bearing assemblies of D1-D3 are defined which comes within the scope of the customary practice followed by persons skilled in the art. Consequently, the subject-matter of claims 4,9, 16 and

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/US2004/038250

25 appears to lack an inventive step.

6 DEPENDENT CLAIMS 12-15, 22,23

The subject-matter of dependent claims 12-15, 22 and 23 defines novel combinations of subject-matter, each part however being separately known by different prior art disclosures (document D1+D4 or D3+D4). Although these combinations are novel with respect to the available prior art, it is not apparent to the skilled person what inventive technical effects the specific combinations of subject-matter produces. Should the applicant regard this subject-matter as involving an inventive step, a new independent claim should be drafted to include these features, bearing in mind that the features known from document D1 should be placed in the preamble of such a claim in accordance with Rule 6.3(b) PCT. The applicant should also indicate in the letter of reply the difference, in terms of technical features, between the subject-matter of the new claim vis-à-vis the state of the art, the technical effect caused by this difference and the technical problem solved by this effect. The applicant is emphasized to draft new claims having unity of invention (Rule 13 PCT) in mind, i.e. draft claims such that the novel features of each independent claim are so linked as to form a single general inventive concept.
